No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

For the latest information on annotation of this clone, please see http://www.kazusa.or.jp/kaos/cgi-bin/agd_graph.cgi?c=Kl3El3
Genes with similarity to proteins in the databases are described in 'product' or 'note' qualifiaes. Genes that have no significant protein similarity are described as 'unknown protein.

The software programs used to predict genes include: Grail (Informatics Group, Oak Ridge National Laboratory, http://compbio.ornl.gov/Grail-1.3/), GENSCAN (Chris Burge, MIT, http://CCm.081.mit.edu/GENSCAN.html), NetGenes (S.M. Hebsgaard, et al., CBS, Technical University of Denmark, http://www.cbs.dtu.dk/services/NetGenes/) and SplicePredictor (Volker Brendel, Stanford University, Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, Washington University School of Medicine, St. Louis, http://genome.wustl.edu/eddy/tRNAscan-SE)
This sequence may not be the entire insert of this clone. It may be shorter because we remove overlaps between neighboring submissions. The 5' clone is MCB22 and the 3' clone is MHP21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /evidence=not_experimental

Genes with similarity to proteins in the databases are described
as 'putestive', 'like' or 'similar to'. Genes that have BST
similarity but no significant protein similarity are described as
'unknown proteins'. Genes that are annotated based only on gene
prediction software are described as 'hypothetical proteins'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://gonaic.stanford.edu/-chris/GENSCANW.html), Fexa (V.Solovyev
& A.Salamov, Sanger Centre, http://genomic.sanger.ac.uk/),
NetPlantGene (S.M. Hebsgaard, et al., CBS, Technical University of
Denmark, http://www.obs.dtu.dk/NerPlantGene.html) and
eMotif(Nevill-Manning, C.G. Wu, T.D. & Brutlag, D.L.,
http://motif.stanford.edu/projects.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /translation="magrnrkybakkyfigaccnryvnnvsmgasglysfgaqnavavf

It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the agps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     gap of unknown length

Claim 1; SEQ ID NO 1817; 134pp; English

This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up characteristics. Specifically, it refers to identifying genes that are up care and an are as a constant of strong the heterodimeric EZFa/DPa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, carey managentics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, blochemistry, signal corp. plants, altered hobidosynthesis, transduction, storage lipid mobilisation and/or altered photosynthesis, cach relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers during transformation of cells or tissues. The identified genes play a cole in a variety of biological processes such as DNA replication, cell wall biosynthesis, introgen and/or carbon metabolism or they function as transcription factors. This polymucleotide sequence is thale cress cDNA repressed 1.3 fold or more in plants overexpressing the EZPa/DPa

                                                                                                                                                                      ,
                                                                                     The present invention provides the protein and coding sequences of Arabidopsis thaliana VRN1. This protein is capable of altering the vernalisation responses of a plant. Also provided are a number of PCR primers used to isolate the sequences. The sequences are useful in the production of crop plants, where they are able to control the timing of flowering, the duration of vernalisation required, the optimum temporature, or even eliminate the need for vernalisation completely. The present sequence is the VRN1 coding sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Š
```

3179 The present invention provides the protein and coding sequences of Arabidopsis thaliana VRNI. This protein is capable of altering the vernalisation responses of a plant. Also provided are a number of PCR primers used to isolate the sequences. The sequences are useful in the production of crop plants, where they are able to control the timing of Ilowering, the duration of vernalisation required, the optimum temperature, or even eliminate the need for vernalisation completely. The present sequence is the VRNI gene 9 Novel VRNI polynucleotide sequence encoding a polypeptide which alters vernalization response of plant in which VRNI nucleic acid is expressed, useful for influencing and assessing vernalization phenotype of plants. 3120 AGGGTCCCCAGATAAGTTTGTGAGTAAATTCAAGGATGAGCTTTCGGTTGCTGTTGCACTC ThrValProAspGlyHisValTrpArgValGlyLeuArgLysAlaAspAsnLysIleTrp 21 ArgvalProAspLysPheValSerLysPheLysAspGluLeuSerValAlaValAlaLeu Sequence 5000 BP; 1447 A; 871 C; 931 G; 1750 T; 0 U; 1 Other; 5000 320 0 1 95 Length:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid array or probes representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the plant cell production of transgenic plants, cells and seeds and in producing with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes an Arabidopsis thaliana nucleic acid (1). The polypeptide (II) encoded by (I), transgenic plant (III) or geneticallly condified cell (IV) are useful for screening a candidate agent for its biological effect, by combining the candidate agent with (II), (III) or (IV), and determining the effect of the candidate agent with (III) or (IV), and determining the modulate homologous or related genes, for congocial compositions that modulate the expression or function of its crocded protein, for mapping functional regions of the protein, in congocial passociated physiological pathways, for genetic manipulation of cells, preferantly plant cells, in screening assays of various plant strains to determine the strains that are capable of vichstanding a particular disease or environmental stress for enhancing or inhibiting production of blosynthetic product in a plant, for or inhibiting production of blosynthetic product in a plant, for or inhibiting production of blosynthetic product in a plant, for or inhibiting production of probes for the detection of mRNA in biological samples, to generate additional copies of (I), to generate ribozymes or oligonucleotides, and to create genetically modified and transgenic organisms, such as plant cells and plants. (II) or (III) is useful for introducing or improving disease resistance and stress consecution plants, for screening biological active agents, e.g., fundicides, insecticides, etc., and for elucidating biochemical pathways. (III) is useful as crops for their enhanced diseased resistance, enhanced clarates of interest, for screening programs, as crops which exhibit enhanced tolerance to environmental stress, or to produce a factor. This endance in plants a nucleic acid that may correspond to maturally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel Arabidopsis thaliana nucleic acid useful for identifying homologous or related genes, and to create genetically modified and transgenic organisms, such as plant cells and plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     occurring Arabidopsis thallana expressed sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the US patent office at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Yu Y;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention comprises the amino acid and coding sequences of proteins involved in the control of flowering time in rice. The DNA and protein sequences of the invention are useful for modulating flower architecture and flowering time, the DNA and protein sequences are useful in the area of plant biotechnology, commercial plant farming and agriculture. The present wheat DNA sequence shows homology to the rice sequences of the

The DNA and protein sequences of the invention are useful for modulating flower architecture and flowering time, the DNA and protein sequences are useful in the area of plant biotechnology, commercial plant farming and agriculture. The present DNA sequence encodes a rice flowering-related protein of the

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 3, 1
